# Cardano's Decentralized Oracle

### We started with a stablecoin.

In early 2022, a small group of Cardano builders got together to solve a problem. Cardano needed a stablecoin. The Terra/Luna algorithmic stablecoin had just collapsed. And Cardano's only stablecoins in development were algorithmic.

Community members built USDM, the first regulated fiat-backed stablecoin on Cardano, which launched to institutional users in 17 states on March 16, 2024.

On April 17th, 2024 Norwegian crypto exchange NBX became the exclusive minting partner for USDM in Europe.
