Say hi to Charli3

Cardano's Decentralized Oracle

CHARLI3

Charli3 is the premier Oracle solution for Cardano. Our focus is on delivering accurate and timely data for Dapps to use in their smart contracts. Off chain and on chain data is possible, and the outside use cases can be endless.

Crypto pricing, stock pricing, commodities, insurance claims, medical records, shipping logs, inventory management, sales management, manufacturing, banking records, etc etc etc....

The interoperability and adoption of blockchain with tradfi and legacy industries starts with Oracles. Security is paramount in data management and that is our primary focus. Security, accuracy, and reliability, helping to bring Cardano one step further into the future.

We started with a stablecoin.

In early 2022, a small group of Cardano builders got together to solve a problem. Cardano needed a stablecoin. The Terra/Luna algorithmic stablecoin had just collapsed. And Cardano's only stablecoins in development were algorithmic.

Community members built USDM, the first regulated fiat-backed stablecoin on Cardano, which launched to institutional users in 17 states on March 16, 2024.

On April 17th, 2024 Norwegian crypto exchange NBX became the exclusive minting partner for USDM in Europe.
